Re: Letter of Recommendation
Project: Paradise Valley Community College

Dear Lloyd,

Before the memories of a project well done fade away I wanted to thank you for a job well done at the Paradise Valley Community College. Triad's performance on this very challenging architectural structural steel project exceeded our expectations.

The project had some very unique design elements that would have not turned out as planned if it were not for the experienced management staff at Triad. Although the project was not a large building it was a very technical design with the sloping roof, canopies, exterior cantilevered stairs, and single column supported patio pods. The final finished product shows the care and skill of the detailing and fabrication personnel at Triad.

In summary Imirzian Architects and the Project Owner were very pleased with the project and without Triad's great performance in the exposed Structural Architectural Steel components this would not have been possible. If anyone of your future customers or project owners would like to discuss Triad Steel Services performance I would be happy to share this very positive experience with them.

Sincerely,

Dean Piles
Vice President Operations
